

CIA 1 – Component 2

AI-Integrated Responsible Data Audit using Generative AI

Course: Responsible Artificial Intelligence

Unit 2: Ethics of Data Power, Consent, and Digital Inequality

Marks: 20 Marks (Reduced to 10 Marks)

Objective

This activity enables students to critically examine how digital platforms collect, process, and use personal data. Students will use Generative AI tools to perform a responsible data audit and evaluate ethical concerns related to privacy, consent, manipulative design practices, and digital inequality.

Task Instructions

Step 1: Select a Digital Platform/Application

Choose any one application/platform from the following categories:

- Social Media: Instagram, Facebook, X (Twitter), Snapchat
- E-commerce: Amazon, Flipkart, Meesho
- Streaming Services: Netflix, Spotify, YouTube
- Productivity Tools: Google Workspace, Microsoft Teams, Zoom
- Educational Platforms: Coursera, Duolingo, LinkedIn Learning

Step 2: Review the Privacy Policy

1. Visit the official website of the selected application.
2. Read its Privacy Policy and Terms of Service.
3. Identify:
 - Types of data collected
 - Purpose of data collection
 - Third-party data sharing practices
 - User rights and controls
 - Consent mechanisms

Step 3: Use Generative AI for Data Audit

Use any Generative AI tool:

- ChatGPT
- Google Gemini
- Microsoft Copilot

Generate insights by providing prompts such as:

Prompt 1:

"Summarize the privacy policy of [Application Name] and identify the types of personal data collected."

Prompt 2:

"Analyze whether the consent mechanisms in [Application Name] follow ethical principles of informed consent."

Prompt 3:

"Identify any manipulative data practices, dark patterns, or privacy concerns in [Application Name]."

Prompt 4:

"Evaluate potential issues of digital inequality and representational harm associated with data collection practices in [Application Name]."

Prompt 5:

"List ethical concerns that may arise from the platform's data practices from a Responsible AI perspective."

Step 4: Critically Verify AI Responses

Do not accept AI-generated outputs directly. Verify them using the actual privacy policy and external credible sources.

Prepare the following table:

AI Observation	Correct/Incorrect	Evidence from Privacy Policy	Missing Ethical Issues	AI Limitations/Hallucinations

Examples of verification:

- Did the AI correctly identify data collection practices?
- Did the AI overlook consent issues?
- Did the AI exaggerate or assume facts not mentioned in the policy?
- Did the AI fail to discuss vulnerable populations or accessibility concerns?

Report Structure

Section 1: Introduction

- Name of selected application
- Reason for selection
- Brief description of the platform

Section 2: Privacy and Consent Analysis

- Data collected
- Purpose of collection
- Consent mechanisms
- User rights and controls

Section 3: Ethical Data Audit

- Privacy concerns
- Manipulative practices or dark patterns
- Data power and surveillance concerns
- Digital inequality issues
- Representational harm concerns

Section 4: Critical Evaluation of Generative AI

- Correct observations generated by AI
- Missing ethical concerns
- Hallucinations or incorrect claims
- Biases and limitations of the AI tool

Section 5: Ethical Reflection (250–300 words)

Reflect on:

1. What did you learn about responsible data practices?
2. Can users truly provide informed consent online?
3. What responsibilities do organizations have in ensuring ethical data practices?
4. How reliable are Generative AI tools for ethical auditing tasks?

Deliverables

Submit a single PDF containing:

1. Cover Page
2. Responsible Data Audit Report (with Screenshots of AI prompts and interactions)
3. Verification Table
4. Ethical Reflection Summary
5. References (Privacy Policy URLs and other sources)

Evaluation Rubric (10 Marks)

Criteria	Marks
Identification of Privacy and Consent Issues	2
Analysis of Digital Inequality and Representational Harm	2
Critical Verification of AI Outputs	3
Ethical Reflection and Responsible AI Insights	2
Organization, Screenshots, and References	1

Learning Outcome: Students will develop the ability to critically evaluate data practices, recognize ethical concerns in digital platforms, and understand both the capabilities and limitations of Generative AI in conducting responsible data audits.
