

TRACE Test – Should AI Make This Decision?

Based on the topic “**Delegating Human Judgment to Machines: Where Should Automation Stop?**”, students should analyse one real-world decision where AI/automation is used or could be used. The assignment focuses on the **TRACE framework**: Task, Risk, Authority, Contestability, and Evidence.

Choose ONE scenario:

- AI in university admissions
- AI in healthcare/clinical diagnosis
- AI in recruitment
- AI in loan approval
- AI in criminal justice
- AI in student performance evaluation

Assignment Instructions:

1. Give a brief description of the selected scenario.
2. Apply the **TRACE test**:
 - **T – Task**: What part of the decision can be automated?
 - **R – Risk**: What harms or vulnerable groups could be affected?
 - **A – Authority**: Can a competent human question, override, or stop the AI?
 - **C – Contestability**: Can affected people understand, challenge, and obtain a remedy?
 - **E – Evidence**: Is there evidence that AI performs better than the realistic alternative?
3. Clearly identify **what AI should assist with** and **what must remain a human decision**.
4. Identify **one non-negotiable ethical safeguard**.
5. Give a final conclusion: **Should this decision be fully automated, partially automated, or remain human-led? Why?**

Submission Format:

- **Length**: 1 page
- **Individual assignment**
- Include **student name, register number, class, and date**
- Use appropriate headings and references.
- Submit as **PDF**.
